Muswelldale, Boksburg

Country: South Africa

State/Region/Province: Gauteng

City: Boksburg

Additional Information: [Spend more time loading
and less time picking up
primers!!!](#)

The PRIMER-PRO by Double-Alpha is a unique new approach to handling primers, and the solution reloaders have been waiting for!

As any reloader knows well, manually filling [primer tubes](#) can be the most time-consuming and aggravating step in the whole reloading process, and few good, automated solutions exist.

Until now!

The PRIMER-PRO by Double-Alpha is an innovative patent-pending design which departs from the traditional vibratory bowl solution

used by all other [automated primer tube machines](#). The PRIMER-PRO uses a collator type solution where the primers are allowed to exit the bowl through 20 precisely formed channels, ONLY if they are orientated in the correct direction (Anvil side up). If they are Anvil down, they will not pass through the channel, and rather slide back into the bowl as their channel reaches the top of the rotation, to enter again later, correctly oriented.
